

Sub B1

a1

1. (Amended) An audible alarm for use in an alarm system, the audible alarm producing a plurality of distinct audible alarm signals which are selectable in response to a remote control signal.

Sub B3

a2

10. (Amended) An audible alarm for use in an alarm system that produces a plurality of distinct audible alarm signals, the audible alarm being controlled by a remote control signal, which selects at least one of the distinct audible alarm signals, sent over a notification appliance circuit.

11. (Amended) The audible alarm of Claim 10, wherein power is also supplied over the notification appliance circuit.

15. (Amended) The audible alarm of Claim 14, wherein the microcontroller receives the control signal over the notification appliance circuit from a control panel.

Q3

16.

Sub B5

(Amended) An audible alarm for use in an alarm system, comprising:
an alarm generator to generate a plurality of distinct, audible alarm signals; and
an alarm signal selector responsive to a remote control signal applied to the audible alarm.

Sub B6

a4

19.

(Amended) An alarm system comprising:
at least one audible alarm to generate plural distinct audible alarm signals; and
a system controller coupled to the audible alarm by a pair of lines, the system controller providing power over the pair of lines and sending a control signal over the pair of lines for directing the audible alarm to selectively produce the plural distinct audible alarm signals.

Sub B6

a5

22.

(Amended) A method of controlling an alarm system, comprising:
providing an audible alarm coupled to a remote controller; and
